

# Anas Alnaasan

Back-End Developer

## Profile

Junior Back-End Developer with a strong focus on PHP and Laravel, dedicated to implementing SOLID principles and OOP patterns to write maintainable code. Experienced in developing core system features like Student Dashboards, advanced filtering engines, and RESTful APIs. Passionate about optimizing database structures and delivering functional, high-quality web solutions while maintaining a deep technical mindset.

## Education

**Middle School Student at Mansoura Preparatory School for Boys, Mansoura, Dakahlia, Egypt**

September 2026 - Present

## Experience

**Junior Back End Developer at [T-square](#), Mansoura, Dakahlia, Egypt**

April 2026 - Present

Responsible for designing and developing scalable back-end components, optimizing database performance, and implementing clean code principles to enhance the learning platform's user experience.

- Developed a dynamic instructor profile system and an integrated "Contact Us" module to enhance user communication and engagement.
- Engineered a comprehensive course review system, incorporating user data and avatars to boost platform credibility and social proof.
- Designed and implemented a personalized Student Dashboard for real-time tracking of enrolled, completed, and ongoing courses.
- Implemented an enhanced course filtering engine for students, tracking progress status (In-progress, Completed, Total) and integrating accurate text-search by course titles.
- Applied Clean Code principles and SOLID patterns to optimize data filtering logic, ensuring high maintainability and system scalability.
- Engineered a comprehensive Payment Management System with full CRUD functionality, enabling financial tracking (Total, Pending, and Orders) and multi-status filtering (Refunded, Cancelled, Pending, Completed).
- Developed an advanced Certificate Management System allowing students to view and download certificates, while

providing admins with control features to securely regenerate certificates to resolve student rendering issues.

- Built a robust Course Details API that aggregates complex data—including promotional videos, media assets, and course metrics—optimized for fast frontend rendering.

## Internships

### Back-End Developer Intern at [ipda3 Tech](#), Mansoura - Egypt

July 2025 - February 2026

- Blood Bank Management System Project
- Successfully architected and deployed a backend infrastructure for a Blood Bank system using Laravel and MySQL, ensuring efficient data flow.
- Engineered secure RESTful API endpoints to manage real-time donation requests, improving data retrieval speed.
- Designed complex database relationships (One-to-Many/Many-to-Many) to synchronize city data with donor profiles accurately.

## Skills

**Back End:** PHP (OOP), Laravel, MySQL, RESTful APIs, Git

**Frontend Fundamentals:** HTML5, CSS3, JavaScript (ES6), Bootstrap, Responsive Web Design

**Tools & Version Control:** Git, GitHub, Basic understanding of CI/CD concepts

## Projects

### Blood Bank • [GitHub](#)

July 2025 - February 2026

Blood Bank Management System

Laravel & MySQL | Full-stack Project

**Project Overview:** A platform designed to automate blood donation workflows, efficiently bridging the gap between donors and medical institutions.

**Key Technical Contributions:**

**System Logic:** Architected the backend using PHP (OOP) and Laravel, adhering to the MVC pattern for structured and maintainable code.

**Schema Design:** Engineered a MySQL relational database to handle complex entities like donor records, blood inventory, and hospital requests.

**Core Functionality:** Developed secure Authentication, real-time inventory management, and an automated matching algorithm for urgent blood needs.

Development Workflow: Utilized Git for version control and integrated a responsive interface using HTML, CSS, and JavaScript.

**Restaurant website • [GitHub](#)**

Developed a responsive food ordering website using HTML, CSS, JavaScript, React.js, and Bootstrap. Implemented interactive UI components and integrated with backend APIs for dynamic content.
